

GO BABY GO!

What is Go Baby Go?

In 2006, a University of Delaware professor transformed a standard child's toy – a battery powered car – and changed the life of the child. The child struggled to move around and had never been able to move or keep up with friends. With some simple re-engineering of a standard battery-powered car – the creation of the very first Go Baby Go! car – a movement revolution started that has reached thousands of children all over the world. Go Baby Go! transforms the lives of children with mobility challenges by providing adapted battery powered cars and bikes to help them move in their environment ... just like the other kids do.

Fast Facts:

Go Baby Go is FREE for families!

Talk to your physical therapist, health care provider, or contact us directly about getting a car.

Every car is personalized for your child's needs and interests.
